

ABSTRACT OF THE DISCLOSURE

The invention is prevent drawbacks resulting from the bubble generated at the downstream side of the filter, while minimizing the waste in the ink.

5        The recording head has a sub tank for storing ink supplied from the exterior, and a liquid chamber storing the ink supplied from the sub tank and supplying ink directly to a nozzle for ink discharge. A filter is provided between the sub tank and the

10      liquid chamber. The liquid chamber holds ink of a predetermined amount in such a manner that the ink therein is separated by gas from the filter.
